Stocked: These products are in stock.

Non-Stocked: These items are made to order.

Custom Templates: Custom template requests require drawings, complete with template specifications. There is a **10-day production period** for custom orders; if a shorter lead-time is necessary, please confirm when placing your order.

Template Care and Maintenance

Like all equipment, some maintenance of AsPaint templates is required. To keep your templates in good condition follow the directions below.

Templates

AsPaint Templates are designed to be repeatedly used to imprint fully compacted, hot mix asphalt that is warm enough to permit deformation. They are manufactured using a special grade of steel, woven into a wire rope. The particular weave design used resists permanent deformation and provides the flexibility necessary to conform with the surface topography and to allow the templates to be rolled up against a curb or wall. The templates are Mig welded into the various standard patterns.

Imprinting

AsPaint templates are compacted into the **warm** asphalt mat using large vibratory plate compactors or rollers. Compacting the templates into asphalt that is too cold can be damaging to the templates and drastically shorten their useful life. Forcing the templates into cold asphalt can cause breakage at the weld joints and/or distortion or expansion of the templates. By following the instructions laid out in this document, breakage can be quite easily repaired. Distortion and/or expansion, however, are much more difficult to repair and can result in unusable templates.

Asphalt Temperature, Imprinting & Breakage

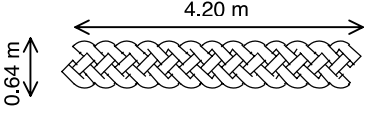

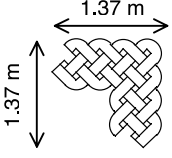

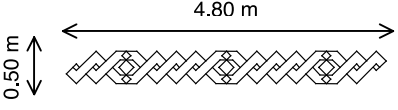

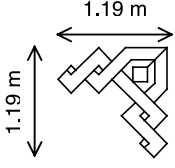

- The main cause for breakage is the lack of heat penetration into the asphalt. If the asphalt temperature is too low, it will put excessive stress on the templates, which may cause welds to break. Penetration of at least 3/4" to 1" is recommended.
- The correct imprinting temperature is highly dependent on asphalt design, as well as the density of the pattern being imprinted. (e.g. when using very dense templates, like the Eurofan template, which has more welds and wire rope than average, you will have to imprint at a slightly higher temperature.)
- Another cause for template breakage is exposure to extreme heat. (e.g. reheating the asphalt with a StreetHeat, Infrared Heater, or torch while the AsPaint template is still in place.) The extreme heat can make the template "brittle" resulting in breakage.

Transportation and Storage of AsPaint Templates

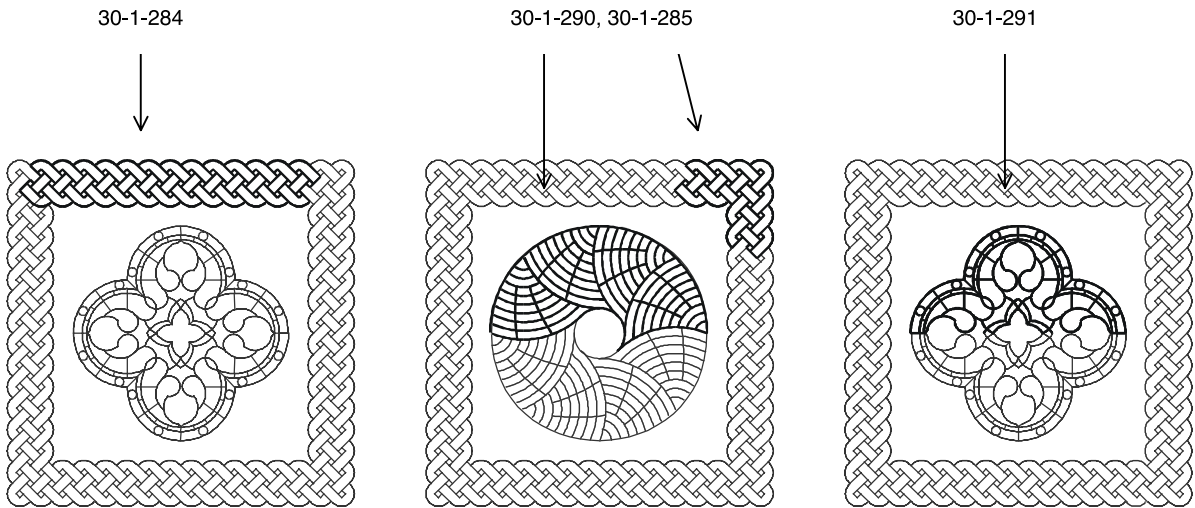

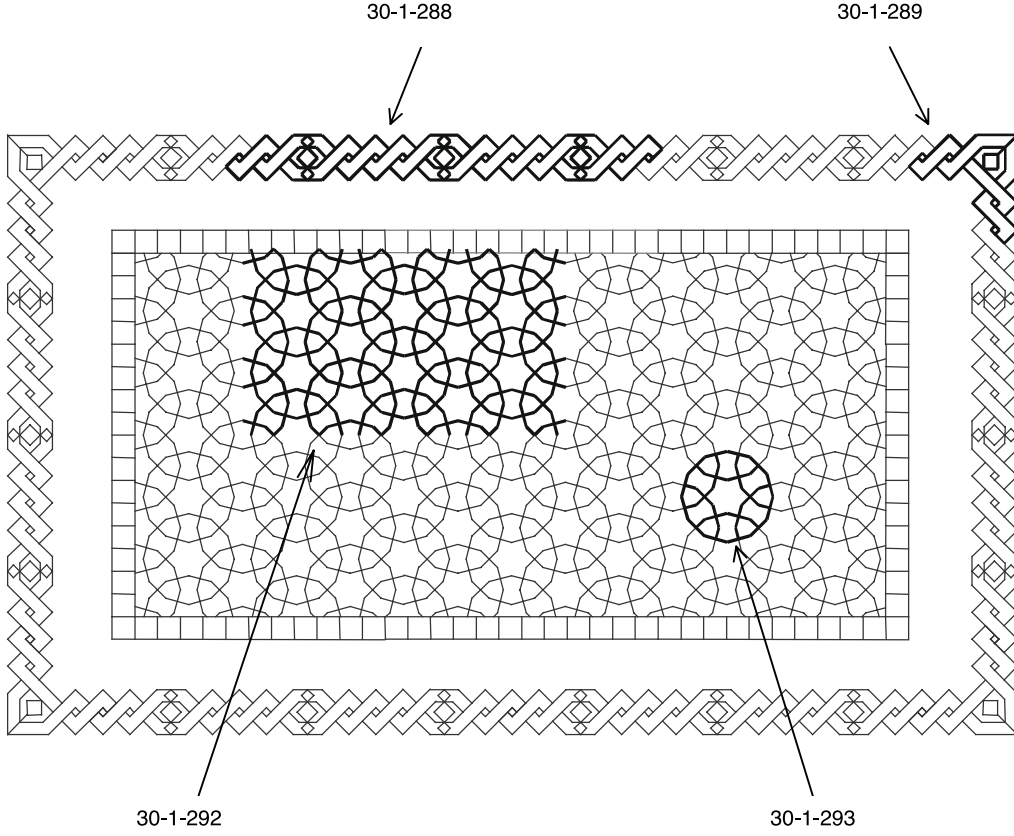

AsPaint templates are shipped new to the applicator in a rolled configuration. This method of transportation is acceptable due to the fact that no impact force has yet been put on the template. Once impact force has been applied to the templates they should not be rolled to transport. Rolling templates into too tight of a diameter may cause stress fractures in the welds, leading to breaks. Twisting or torsional loads, such as would be applied rolling the templates tightly, can also place excessive stress on the welds. If rolling is absolutely necessary, the diameter of the roll should be made at least 45 cm.

We recommend that the templates also be stored in the FLAT position. This will help ensure a long and productive life from each template.

FREESTYLE TEMPLATES

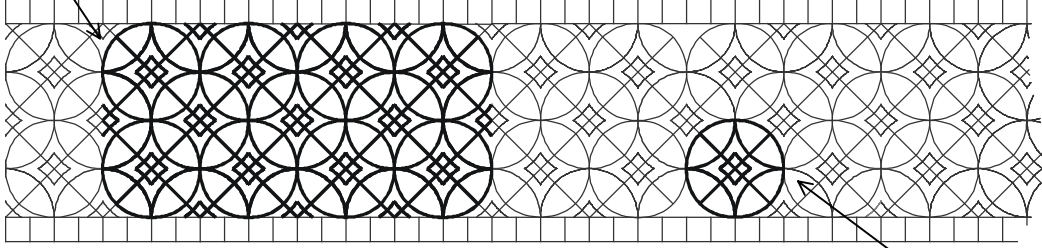

Product Number: 30-1-284		Weight: 10.00 kg
Description: Celtic Weave Border		Area: 2.70 m ²
Brick Size: N/a		Non-Stocked item
Product Number: 30-1-285		Weight: 5.50 kg
Description: Celtic Weave Border Corner		Area: 1.69 m ²
Brick Size: N/a		Non-Stocked item
Product Number: 30-1-288		Weight: 8.26 kg
Description: Diamond Weave Border		Area: 2.38 m ²
Brick Size: N/a		Non-Stocked item
Product Number: 30-1-289		Weight: 3.60 kg
Description: Diamond Weave Border Corner		Area: 1.43 m ²
Brick Size: N/a		Non-Stocked item
